Building Systems, Streamlining Processes

I'm a process engineer who thrives in fast-paced environments where I can leverage my knowledge of process improvement and coding to free up people's time. I'm experienced in building tools to automate work, leading teams, and finding win-win solutions --- as well as fighting fires and becoming a go-to source for quick problem solving.

EXPERIENCE

Times Microwave Systems

Wallingford CT

A leader in coaxial cable innovation and manufacturing.

Senior Process Engineer

March 2017 - Present

Developing systems to streamline communication within the company. In this capacity I designed an engineering request system. Automated manufacturing processes to increase speed and reduce errors.

Product Design Engineer

February 2012 - March 2018

Writing technical documentation in support of manufacturing, sales, and operations. I designed tools to streamline the processing of 10,000+ documents each year. Worked with manufacturing to ensure documentation met their needs.

SKILLS

- 7+ years working alongside manufacturing as a design/process engineer
- Expert in Microsoft Office Products including macros
- Six Sigma Black belt with a focus on analyzing data sets
- Identify and realize process improvements
- Using statistical modeling for data driven decision making

EDUCATION

Six Sigma Black Belt

June 2016

Central Connecticut State University

Masters of Science - Mechanical Engineering Technology

May 2015

Central Connecticut State University

Bachelors of Science - Mechanical Engineering Technology

May 2012

Central Connecticut State University
